# “GENERATION REGENERATION”

/  
SEPTEMBER 22-23, 2014  
VENICE, ITALY

**FINAL  
PROGRAMME**

**Dear Friends,**

One more time we will associate our scientific meeting with the mythic place of Fine Arts! Remember as well, that Venice is the place where “the father of Modern Science” Galileo Galilei saved his life by doing a scientific demonstration with a mathematical model showing evidence that Earth is a globe “e pur si muove” !

With fresh cell therapies, we were almost on the same path as Galileo in promoting biological and physiological evidence in regenerative medicine.

The rapid growth in the use of fresh cell therapies, including PRP and stem cells, is due to pioneers’ dedication to scientific research, in addition to their ability to focus their creativity in a new approach to treatments and to medical device design.

This 8<sup>th</sup> Biobridge “**Generation Regeneration**” Conference will be focused on two advanced therapies:

#### **The development of fresh Bone Marrow Stem Cells:**

Where Italian physicians not only have contributed to its development over the past 10 years, but they are probably leaders of the worldwide research nowadays, the reason for which we have invited Prof Massimo Innocenti to address the keynote lecture.

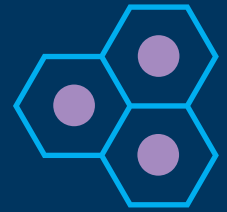

#### **The development of Cellular Matrix, PRP -HA**

The synergistic association of PRP and Hyaluronic Acid, potentially with the inclusion of BMC, has created a new device accomplishing the three functions of tissue engineering in only 10 min through a point-of-care preparation for in vivo expansion of cells, in 3D!

Welcome and please enjoy the lectures on the clinical updates on these two scientific and medical innovative approaches! Lecturers will show the medical world how to improve the healing process in a broad range of pathologies, as well addressing the well-being of the patient and physician satisfaction!
